REQUIREMENTS DOCUMENT - MEDIQUEUE

SOFTWARE REQUIREMENTS DOCUMENT

Project Name: MediQueue – Clinic Appointment & Queue Management System
Document Title: Requirement Document
Document ID: MQ-CMP-001
Version: 1.0
Document Status: Draft – For Review
Prepared By: Project Coordinator
Project Category: Healthcare Information System
Project Management Tools: Jira, Google Docs, Google Drive
Document Date: 29 October 2026Document Version: 1.0

1. Introduction

This document describes the proposed functional and non-functional requirements of the MediQueue system.

It provides a common understanding of the expected system behavior and quality requirements for stakeholders, the development team, and testers.

2. Project Overview

MediQueue is a proposed system that helps patients manage clinic appointments and enables clinic staff to organize appointment information and patient queues.

The system aims to improve convenience, efficiency, and visibility throughout the appointment process.

3. User Roles

The proposed system includes the following user roles:

User Role	Description
Administrator	Manages system users and relevant clinic information
Receptionist	Assists with appointment management and queue operations
Doctor	Views relevant appointments and queue information

Patient	Books and manages appointments and checks appointment status

Role permissions must be confirmed during requirements validation.

4. Functional Requirements

Functional requirements describe **what the system should do**.

FR ID	Requirement	Description	Priority
FR01	User Registration	The system should allow new users to register.	High
FR02	User Login	The system should authenticate registered users.	High
FR03	Role Management	The system should provide appropriate access according to user roles.	High
FR04	Appointment Booking	Patients should be able to book available appointments.	High
FR05	View Appointments	Users should be able to view relevant appointment details.	High
FR06	Update Appointments	Authorized users should be able to update appointment details.	High
FR07	Cancel Appointments	Users with appropriate permissions should be able to cancel appointments.	High
FR08	Queue Management	Authorized staff should be able to manage the patient queue.	High
FR09	Appointment Status	Users should be able to view appointment status.	High
FR10	Notifications	The system should provide appointment-related notifications through the supported notification method.	Medium
FR11	Clinic Information	Authorized users should be able to manage relevant clinic information.	Medium
FR12	Appointment History	Authorized users should be able to view relevant appointment history.	Medium

5. Non-Functional Requirements

Non-functional requirements describe **how well the system should operate**.

FR ID	Requirement	Description	Priority
FR01	User Registration	The system should allow new users to register.	High
FR02	User Login	The system should authenticate registered users.	High
FR03	Role Management	The system should provide appropriate access according to user roles.	High
FR04	Appointment Booking	Patients should be able to book available appointments.	High
FR05	View Appointments	Users should be able to view relevant appointment details.	High
FR06	Update Appointments	Authorized users should be able to update appointment details.	High
FR07	Cancel Appointments	Users with appropriate permissions should be able to cancel appointments.	High
FR08	Queue Management	Authorized staff should be able to manage the patient queue.	High
FR09	Appointment Status	Users should be able to view appointment status.	High
FR10	Notifications	The system should provide appointment-related notifications through the supported notification method.	Medium
FR11	Clinic Information	Authorized users should be able to manage relevant clinic information.	Medium
FR12	Appointment History	Authorized users should be able to view relevant appointment history.	Medium

6. Business Rules

The following proposed rules should be validated with stakeholders:

1. Users must log in before accessing protected functions.

2. A patient should only manage appointments permitted by their account permissions.
3. Appointment booking should follow the clinic's availability rules.
4. Cancelled appointments should not remain active in the queue.
5. Only authorized users should manage clinic and queue information.
6. Appointment status should reflect the latest recorded appointment state.

7. Assumptions

- Clinics will provide their appointment availability.
- User roles will be defined before implementation.
- The team will confirm how notifications should be delivered.
- The system will follow agreed data protection requirements.

8. Dependencies

- Stakeholder availability for requirements gathering.
- Approval of the requirements.
- Completion of the relevant system design.
- Availability of the required development and testing environment.

9. Acceptance Criteria

Requirements should be considered ready for implementation when:

- The requirement has a unique identifier.
- The description is clear and understandable.
- The priority has been agreed.
- Relevant stakeholders have reviewed it.
- Dependencies are identified where necessary.
- Acceptance criteria are defined for the associated feature.

10. Requirements Change Management

Any proposed change to a requirement should be documented and assessed for its impact on scope, schedule, cost, and quality.

The project team should review the change with the relevant stakeholders before updating the approved requirements and associated Jira tasks.
